

Javascript Assessment Task

Company: **Binaire Private Limited**
Send assessment to: hr@binaire.app

Objective

This assessment is designed to evaluate your skills in data structures, process optimization, efficient practices and developing a UI which can be used in a short-form media desktop app. You'll be assessed on your creative execution, design structure and attention to visual details.

Note: Use of AI is not permitted for this assessment, and will lead to disqualification.

Task: Movie selection UI

Deliverables: Create a working Netflix-style desktop app UI showing the store-front of a short-form media app. The app has to be developed in Vanilla JS or React.js following the ES6 (EcmaScript) paradigm. The final app should be able to run on any web browser. Integrate all of the following requirements in the UI:

1. 10,000 different TV show selection UI with images using REST API: [LINK](#)
2. Animations and transitions between screens
3. Following screens:
 1. Sign-up screen - Setup a firebase server and authenticate this app using firebase only.
 2. Home screen
 1. Today's top show
 2. Complete list of all TV shows and movies from the API
 1. The items should be rendered with lazy loading
 2. How to avoid memory leaks and unnecessary re-renders?
 3. Profile view - watch history, watchlist, signout screen
 4. Search view
 1. Implement search with hash-map with autocomplete support
 2. Search done on ID, name, release year
4. Following requirements have to be met:
 1. The app should be able to run offline with full API access - app will be switched to online and offline mode randomly and the UI has to tell the user about the current internet connection status.
 2. When app is re-connected to internet, the content has to be updated

Key focus areas: Working version of web app with complete interaction and animation support

Final submission checklist:

1. Complete working project
2. Email subject: Javascript Developer - Netflix UI Assessment – *[Your Full Name]*
